

**Events: Ride with GPS – Using it in Offline Mode** – this will download all of the rides within a specific event in one step.

**Weak Cellular Coverage**

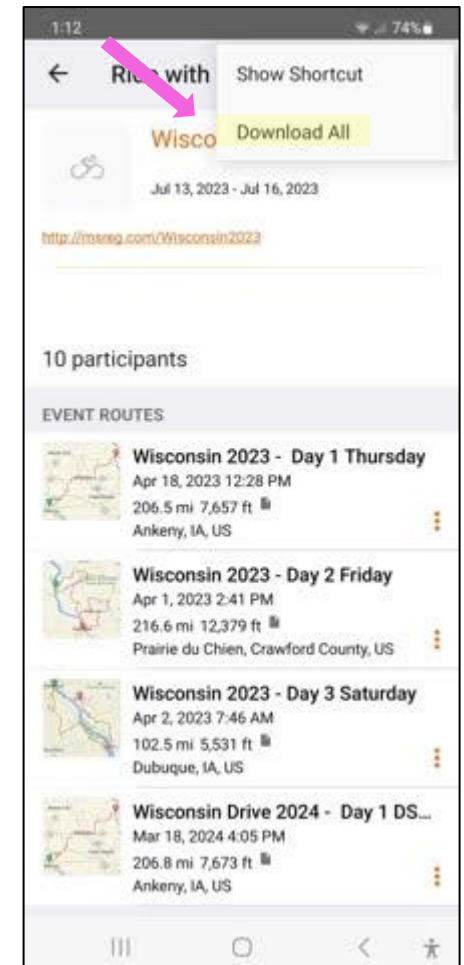

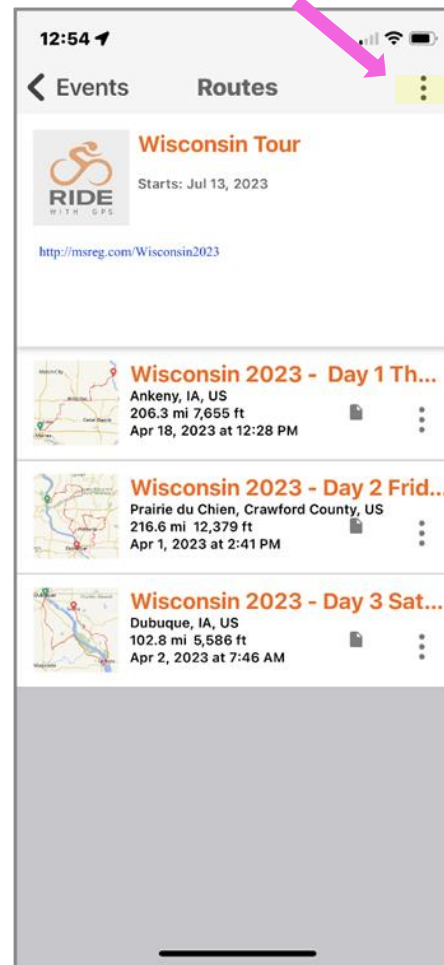

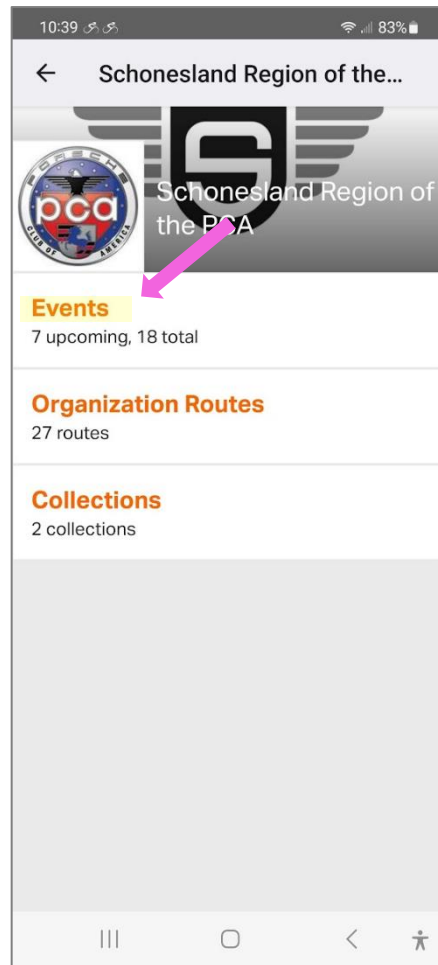

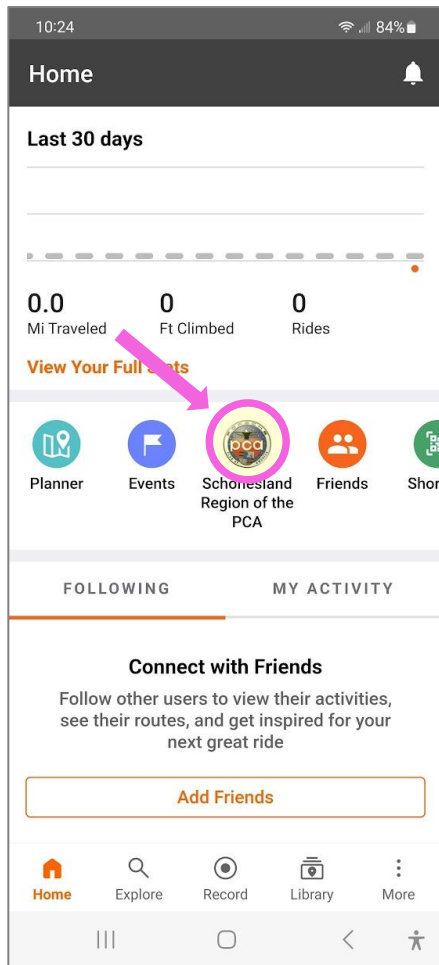

If you will be driving in an area with weak, or no cellular coverage, please follow the steps below to download the maps for offline use, several days prior to the drive.

Open the app, and from the Home screen, click on the **PCA logo**.

Go to **Events** to view your upcoming drives. Click on the current **Event** you need to download.

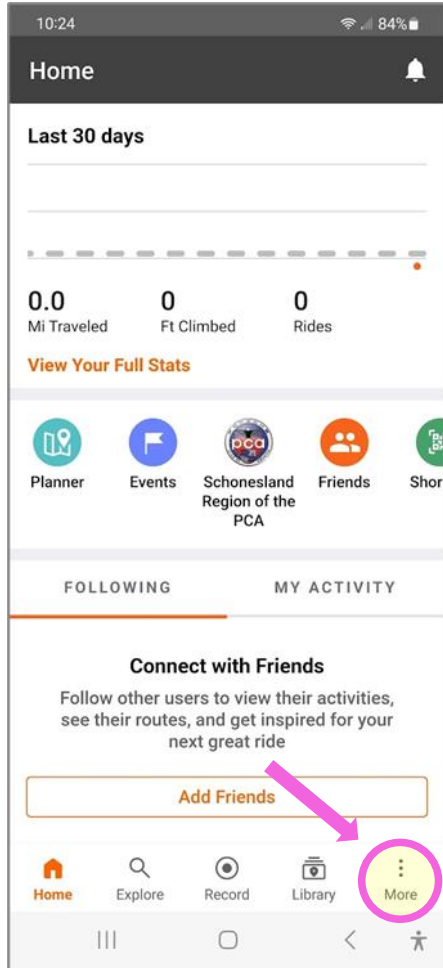

Once you open the **Event**, click on the three dots to download.

Then click **Download All** for off-line use. Once you have downloaded all of the drives 100%, go back to Home screen.

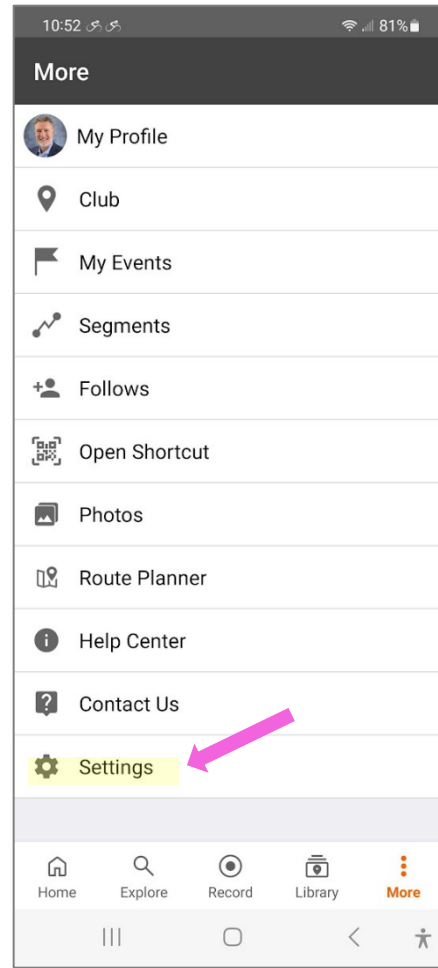

## Placing your phone into “Offline Mode”

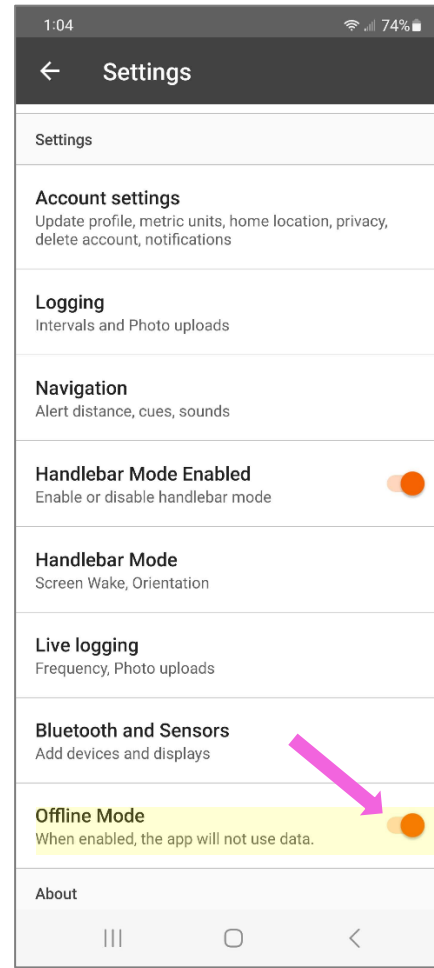

Go to your Home page... and click the **More** icon.

Click on **Settings**

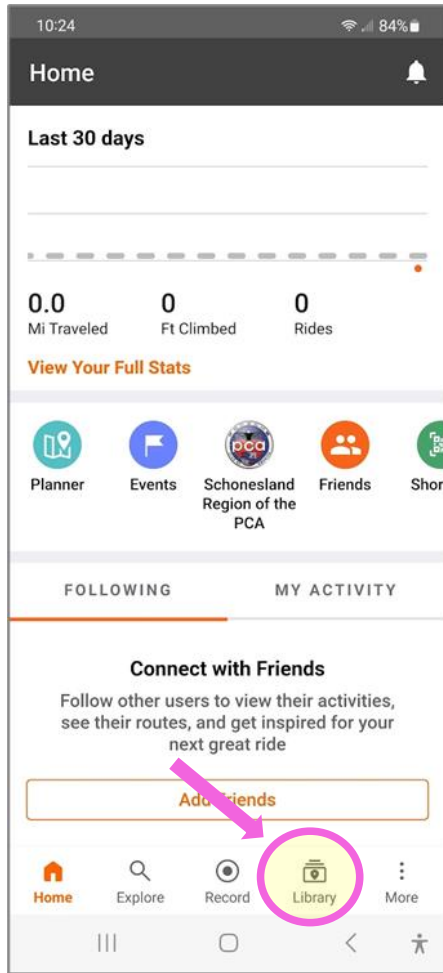

**Scroll Up**, to find the **Offline Mode**.  
Slide the bar to enable **Offline Mode**.

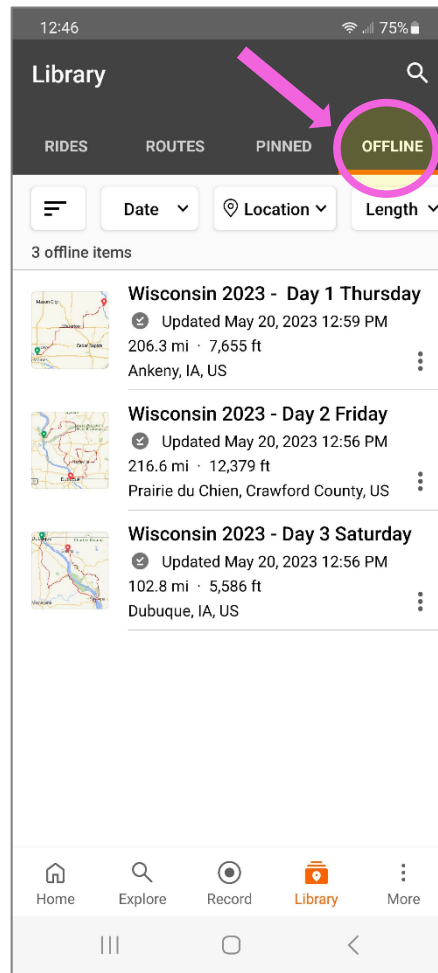

## Finding the downloaded "Offline Route"

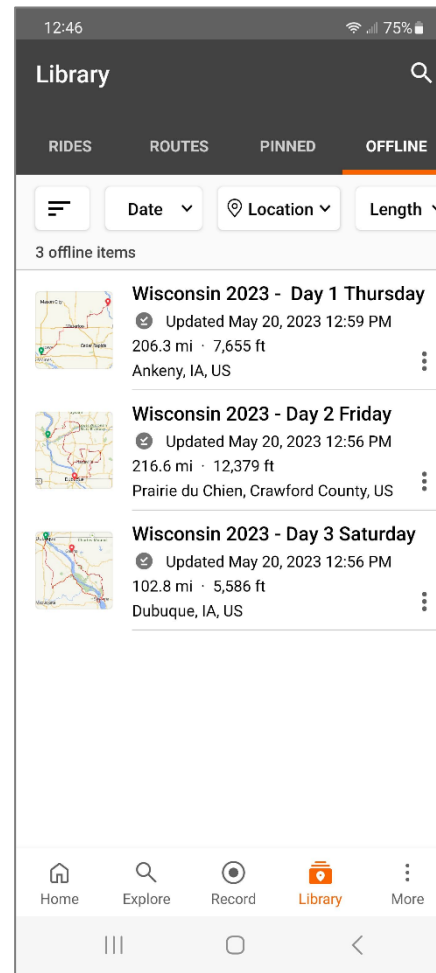

Find the route, click on the **Library** icon...

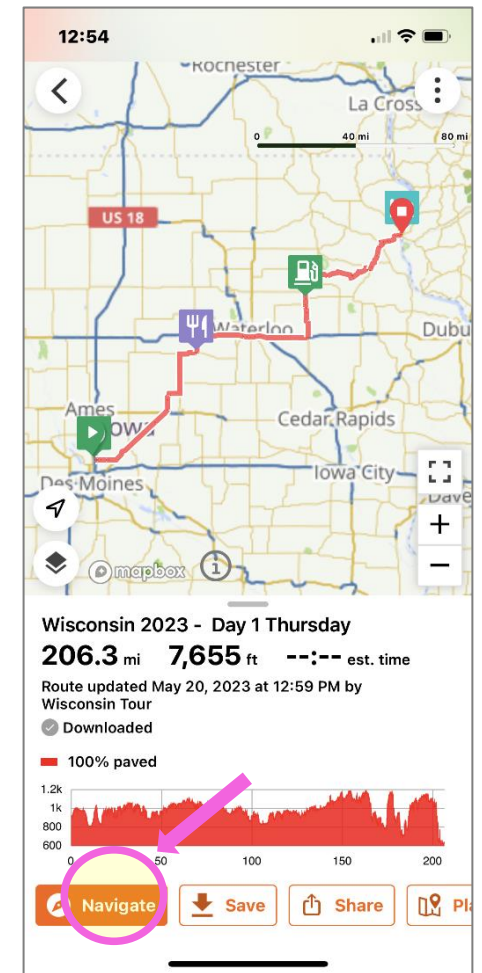

Then click **Offline** tab to see your downloaded Routes.

Click on the Drive for that day.

Click **Navigate** to start the Route.

## Pause or Stop Navigation

Click **pause button** once to pause.  
Click & hold the button to stop navigation.

When you push & hold to stop, you'll have the option to **Resume** or **Finish Ride**.

When you click **Finish Ride**, you can **Save** the drive on your phone, or **Delete**, by scrolling up to not save it. Note that it will NOT delete the drive from the Club account – it simply does not save it on your phone.
